USU Technical Communication and Rhetoric PhD alumna Cana Uluak Itchuaqiyaq, Assistant Professor Avery Edenfield, and Professor Emeritus Keith Grant-Davie have published an article in the Journal of Business and Technical Communications. Expanding the scope of risk communication, the paper, “Sex Work and Professional Risk Communication: Keeping Safe on the Streets,” uses corpus-assisted discourse analysis and keyword analysis to reveal word choice patterns in safety guides produced by street-level sex workers, who are a hypermarginalized group. The authors find that this group uses professional communication to emphasize risk reduction, ultimately arguing that these types of safety guides could help empower other marginalized groups.
